Company

Valeant Pharmaceuticals International is a global, science-based specialty pharmaceutical company that develops, manufactures and markets pharmaceutical products, primarily in the areas of neurology, infectious disease and dermatology. Through its global infrastructure, Valeant develops and commercializes important treatments for patients worldwide. Valeant has made rapid strides under a new management team with a strategic vision and renewed focus on its specialty pharmaceuticals business. The company has implemented major changes in the areas of product management, business development, research and development, corporate governance and supply chain operations.

Situation

Valeant Pharmaceuticals International realized the importance of improving their Portfolio Management and Resource Management discipline and understood the value and importance of systemization, efficiency, and scalability. Valeant looked to LMR Solutions to assist and guide them through the deployment of an enterprise project management solution that would allow them to manage and control Clinical Development projects. Valeant's primary goal was to deploy an integrated solution for viewing and managing clinical projects within the Clinical Development organization.

Solution

LMR Solutions, in partnership with the Valeant Project Team tailored and deployed Valeant's Enterprise Project Management System to provide dynamic web based and custom enterprise project management planning, tracking, organizational and reporting capabilities. Benefits to be gained from the usage of this solution include visibility into project performance.

Valeant decided to deploy LMR Solutions' SMART EPM (Enterprise Project Management) Suite of products (SMART EPM, Project Server 2003, Project Web Access, Microsoft Project Professional, Windows SharePoint Services, SQL, and SQL Analysis Services). Deploying Project Server 2003 has saved time and costs as well as allowing Valeant to scale and meet the increasing demands of the organization. Implementing Project Server also progressed the project management processes, maturity and toolsets of the organization.
